

CANNON SERVICES, LTD.

The Industry's Leading Source for ESP Cable and Control Line Protection Systems

Overview

Cannon's Low Profile Protectors have a slimmer running profile while retaining the similar versatility and features as our standard Protectors. The Protector uses a "compressive wave" design and as a result has a tighter tolerance range on the tubing string. The LP Protectors use channels to shield cables or lines as they transition across the coupling to prevent damage during installation or retrieval of completions. Field installation is quick and simple using our air driven hydraulic installation tools to compress the collars and drive the Taper Pin into place.

Low Profile Protector

Applications

Protection for cables and lines on:

- ❖ Artificial lift
- ❖ Permanent Gauges
- ❖ Intelligent Wells
- ❖ Chemical Injection
- ❖ Fiber Optics
- ❖ Safety Valves
- ❖ Geo Phones

Features & Benefits

- ❖ Designed to fit tubing sizes from 3.50" OD to 13.375" OD
- ❖ Configurations for flat, round, or square cables, bundles or lines
- ❖ Compatible with Fiber Optics
- ❖ Used primarily in single channel configurations
- ❖ Protectors are re-useable saving costs on well recompletions
- ❖ Suitable for high angle wellbores
- ❖ Custom configurations upon request
